Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW02112 represents the human homologue of murine Int6 protein. The Int6 gene is located at chromosome 15 of the mouse genome and is associated with MMTV (mouse mammary tumour virus) integration into a host genome during tumourigenesis. Primers and probes may be derived from the INt6 CDAN sequence and used for the detection of the Int6 gene. These can be used in assays to diagnose MMTV infection, or any other Int6 gene integration. Antibodies against the Int6 protein can be used in the same

                                                                                                                                                                                                                                                                                                                                   AAW02113 is the murine Int6 protein. The Int6 gene is located at chromosome 15 of a mouse genome. The Int6 gene is associated with MMTV (mouse mammary tumour virus) integration into a host genome during tumourigenesis. Primers and probes may be derived from the Int6 gene sequence and used for detection in assays to diagnose MMTV infection, or any other Int6 gene integration. Antibodies against the Int6 protein can be used in the same way. The DNA and protein may also be used gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

DNA encoding Int6 tumour associated protein - and use of reagents derived from them in cancer gene therapy, vaccines, diagnosis and immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence shows murine Int6. Int6 is an integration site for mouse mammary tumour virus (MMTV), which causes deregulation of expression of cellular genes adjacent to the site of MMTV integration in mammary tumours. The Int6 protein has been found to be highly conserved across species, with Drosophila Int6 being 60% identical to human/mouse Int6. This indicates that Int6 is serving a basic life function. The method of the invention comprises assaying a sample to detect a human Int6 nucleic acid sequence, or its fragment, by contacting the sample with a sequence of at least 15 consecutive nucleotides of human Int6 cDNA or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 conservative variant of it, where a disrupted expression or loss of expression of the variant is associated with neoplasia. The method is useful for prenatal screening of a foetus or to pre-symptomatically screen a subject at risk of having cancer. Detecting mutations in the Inté gene can provide diagnostic and prognostic information. The nucleic acids and proteins are useful in immunotherapy, gene therapy or as

This sequence shows human Int6. The human Int6 coding sequence was isolated by using murine Int6 sequences as probes. Human Int6 is cyganised into 13 exons as is murine Int6, and contains a CA-repeat in the 7th intron. Human Int6 has been localised to chromosome 8, more specifically to 8q22-q24. Int6 is an integration site for mouse mammary tumour virus (WMYV), which causes deregulation of expression of cellular genes adjacent to the site of MMYV integration in mammary tumours. The Int6 protein has been found to be highly conserved across species, with comprises assaying a sample to detect a human fine function. The method of the invention comprises assaying a sample to detect a human fine funcleic acid sequence, or list fragment, by contacting the sample with a sequence of at least 15 consecutive nucleotides of human Int6 cDNA or a conservative variant of it, where a disrupted expression or loss of expression of the variant is associated with neoplasia. The method is useful for prenatal screening of a foctus or to pre-symptomatically screen a subject at risk of having cancer. Detecting mutations in the Int6 gene can provide diagnostic and immunotherapy, gene thrapy or as vaccines for treating or preventing cancer. The nucleic acids are useful as probes for isolating homologues of Int6 gene or for detecting mutations in the Int6 gene
from them in cancer gene therapy, vaccines, diagnosis and immunotherapy

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and class I or class II MHC-binding polypeptide. The polypeptides and myeloma, colon cancer, gastric cancer, recating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, asrcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 free invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. Is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcribtion factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also class I or class II MHC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                 ö
New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                            Example 2; SEQ ID NO 1824; 134pp; English
```

Sequence 396 AA;

Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating

```
This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, coreoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRR) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

The Int6 protein deregulates mammary epithelial callular growth. The CDNA and protein are useful as vaccines for treating cancer. This sequence represents the murine Int6 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GRMLFDYLADKHGFRQEYLDTLYRYAKFQYECGNYSGAABYLYFFRVLVPATDRNALSSL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the Int6 protein and the CDNA encoding it. The Int6 protein dergoulates mammary epithelial cellular growth. The CDNA and protein are useful as vaccines for treating cancer. This sequence represents the human Int6 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample contrising selected from (1). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57037 to by determining the expression profile of a gene group comprising these genes. The expression indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention

The polynucleotides are expressed in prostate and are useful as molecular markers, as drug targets, and for detecting, monitoring, preventing or treating diseases and conditions related to prostate, such as prostate cancers. The present sequence represents a prostate specific polypeptide

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunoganic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also polypeptide, is useful for treating cancer. The polypeptide is also caseful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymentic ancer, adenocarcinoms, arcoma, melanoma, lymphoma or leukaemia. These are also useful for treating or preventing myeloms, colon cancer, gastric cancer, adenocarcinoms, arcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed contactine into the was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            109
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

                                                                                                                                                                         ò
                                                                               ठ
                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal procein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed tolypeptide, is useful for treating cancer. The polypeptides and polypeptide are particularly useful for treating or preventing polymerlectides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profilation, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  50 MVDFAMDVYKNLYSDDIPHALREKRTTVVAQLKQLQAETEPIVKMFEDPETTRQMQSTRD 109

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor.

Cransporter, cytoskeltal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified colypeptide. The purified polypeptide, or the antibody that binds to this copypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed cass is in crass in MHC-binding polypeptide. The polypeptide and polypeptide is an particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for streating for treating the above mentioned diseases. This sequence represents an expressed protein tag (BPT) isolated from human tissue for translational composition but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences
                                                                             Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

"Interaction between the Ret finger protein and the Int-6 gene product
and co-localisation into nuclear bodies.";
J. Cell Sci. 112:331-3342(1999).
-!- FUNCTION: Binds to the 40S ribosome and promotes the binding of
methionyl-tRNAi and mRNA.
-!- SUBUNIT: eIF-3 is composed of at least 12 different subunits.
Interacts with TRIM27.
between in vitro protein-protein binding and intracellular protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- TISSUB SPECIPTIOTY: Ubiquitously expressed.
-!- SIMILARITY: Belongs to the EIF3S6 family.
-!- SIMILARITY: Contains 1 PCI domain.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

- FUNCTION: Binds to the 40S ribosome and promotes the binding of methionyl-tRNAi and mRNA.

- SUBUNIT: eIF-3 is composed of at least 12 different subunits.

Interacts with TRIMA? (By similarity).

- TISSUE SPECIFICITY: Ubiquitously expressed.

- TISSUE SPECIFICITY: Ubiquitously expressed.

- DISEASE: Int-6 serves as a site for viral integration of mouse mammary tumor virus (MMTV) in mammary tumors.

- SIMILARITY: Belongs to the EIF3S6 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GRPEGHRGLRGDPLEGNG (in MMTV-induced
